

Investigation Summary Report

Rose Theater Bastrop, LA

HISTORY

DATE OF INVESTIGATION: NOVEMBER 12TH, 2011

PARTICIPANTS: TRACI MYERS, KEITH MYERS, KIRK CORMIER, JAMES PALMER, BESS MAXWELL, JOHN COMBS

NOTE: The Board of Directors of the Rose Theater has allowed reasonable disclosure of any evidence obtained.

The Rose Theater was constructed in 1927 as a venue for traveling vaudeville shows and silent movies of the era. As a movie theater, it was closed in the 1970's. It was reopened in 1985 as a

community theater, and still remains a valuable part of the history of Bastrop, and provides an important addition to the cultural life of the region. The Rose Theater also has a history of unusual activity, that often intrigues its owners and guests. Objects known to have been left in a specific location get moved to new locations. Voices and strange noises are often heard, which can not be generally attributed to the settling on the building. Doors are often opened and closed, with no one around to do so. There is, at times, a feeling of a presence, of someone unseen being close by. Apparitional figures have been seen on the stairwell, near the top, in the balcony area, as well as in the theater proper. A piano near the front, right area of the stage has been heard playing, with no one nearby to have done so. Many of these incidents are often attributed to Mrs. Rose, the wife of the original owner.

EQUIPMENT: Digital Cameras, Infrared cameras and DVR system, Digital audio recorders, Ion Counters, Infra-sound detection equipment, Digital thermometers, Various EMF meters including Tri-Fields, Motion detectors including geophone and laser grid systems, Ovilus interactive voice communications device, and PEAR REG-1 units for the detection of anomalous human consciousness with software on Hewlett-Packard computers

INVESTIGATION

At the times of testing, in the areas tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid system or geophone. No EVP was recorded. No anomalous EMF fields were noted, although there are some areas of high, natural EMF from older wiring. None of these are in areas where an individual might be exposed for an adequate period of time sufficient to cause hallucinations. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas tested. No anomalous hot or cold spots were detected. No anomalous motion was noted.

PERSONAL EXPERIENCES

JOHN COMBS: It is thought that battery drain can possibly be initiated by spirits absorbing energy from the surrounding area near them. I had three sets of batteries, 2 batteries in each set, or Duracell batteries, all new and from 2 different packages, drained during the evening in my flashlight. Upon arrival at the Rose Theater, all 5 testing computers were completely charged. In the carpeted area of the lobby, on the very first test, one of these computers was completely drained in a matter of less than 5 minutes. These computers have battery sets that normally last 5 to 6 hours. When charged back up, that computer functioned normally throughout the rest of the evening, indicating that the drain wasn't a malfunction with the computer or its batteries.

PART TWO

Consciousness Detection

This type of testing is passive in nature and designed to detect, through the quantum tunneling method, the probability that a human type consciousness may be present affecting the REG-1 units, when all incarnate consciousness has been removed from the areas of testing.. The minimum reporting standard for this type testing is $p < .05$, with p (probability) representing the chance that the event could be the result of chance alone in the probability distribution. Thus, the probability of an anomaly is 95% per test, or greater, to be considered statistically significant.

We then compute the probability that all tests are false, that is, that none of the tests indicate an anomaly.

A total of 76 tests were run in all areas. At the minimum reporting standard of .05, we would expect to receive a total of 3.8 tests (4.0) due to chance alone affecting the probability distribution, resulting in 3.8 false positives for the human consciousness being the cause. ($76 \times .05 = 3.8$) The actual mean score for the 25 positive tests was $p < .026119$. The correction for the number of expected false positives would be $25 \times .026119 = 1.985$ false positives, which we would round up to 2. As noted, we received 25 positives, much greater than the mathematically expected 2 if only chance were involved. After the room designation, the number included is the test number conducted in that particular room. The test scores are as follows:

COMPUTER 1 1st test at 7:29 PM 1st positive at 9:34 PM

Dressing Room Two 1 $z = 1.992$ $p < .023186$

Dressing Room Two 2 $z = 1.665$ $p < .047956$

Dressing Room Two 4 $z = 2.741$ $p < .003063$

Dressing Area Bath 1 $z = 1.800$ $p < .03593$

Dressing Area Bath 2 $z = 1.962$ $p < .024881$

COMPUTER 2 1st test at 7:48 PM 1st positive at 8:13 PM

Kitchen 1 $z = 1.701$ $p < .044471$

Kitchen 4 $z = 2.368$ $p < .008942$

Kitchen 5 $z = 2.624$ $p < .004345$

Lobby 2 $z = 1.744$ $p < .04058$

Lobby 3 $z = 2.274$ $p < .011482$

Lobby 5 $z = 1.912$ $p < .027938$

Orchestra Pit 4 $z = 1.805$ $p < .035537$

COMPUTER 3 1st test at 7:38 PM 1st positive at 7:49 PM

Office 2 $z = 1.921$ $p < .027366$

Lobby Tile Area 2 $z = 1.950$ $p < .025588$

Work Room 1 $z = 1.947$ $p < .025767$

Orchestra Pit 1 $z = 1.683$ $p < .046188$

Lobby 7 $z = 1.806$ $p < .035459$

Stage 1 $z = 2.058$ $p < .019795$

COMPUTER 4 1st test at 7:33 PM 1st positive at 8:05 PM

Men's Room 3 $z = 2.351$ $p < .009361$

Men's Room 5 $z = 2.212$ $p < .013483$

Ladies Room 1 $z = 1.860$ $p < .031443$

Work Room, Test D $z = 2.517$ $p < .005918$

COMPUTER 5 1st test at 7:28 PM 1st positive at 10:25 PM

Dressing Room One 2 $z = 1.646$ $p < .049882$

Dressing Room One 3 $z = 2.325$ $p < .010036$

Dressing Room One 4 $z = 1.702$ $p < .044378$

The probability that these 25 tests are all false positives, due to chance alone in the probability distributions, and not indicative of human consciousness interaction when none incarnate was present to do so, through quantum tunneling is:

PROBABILITY

Rhythm
Possibly
Doubt

CLOSING NOTES - PART THREE

There may have been additional incidents, or not. We have presented these incidents in Part Three in the interests of research and completeness of studies performed. It is acknowledged that answers may, in many cases, rely on judgment as to the accuracy of the answer. If the question, "Is the car red?" is posed, assuming the car's color is not a transition color, the answer of either

“yes” or “no” may be easily evaluated. Or, assuming no transition color, the answer to “What color is the car?”, the answer “red” may be easily evaluated. Others are not so simple, “Happy”, for example. And it is readily acknowledged that those hearing a response from an Ovilus device may NOT have sufficient knowledge to correlate a given answer as relevant or “correct”. The volume of comments received from the Ovilus device was very large, and there may be meanings that those of us not experiencing daily life at the Allen House, or intimately familiar with its history, do not have a connotation for. The list is presented as received, in proper order, in the interest of completeness of research conducted.

END PART THREE

CONCLUSION

There was no data gathered or recorded in photography, audio/EVP, or anomalous motions, or other interactive data. The PEAR/consciousness testing was very strong, with the probability of chance only in the data almost nil. The totality of the evidence and personal experiences is strongly indicative of the presence of anomalous consciousness, at the times of testing, in the areas tested. The data gathered, passive, was very strong. The data from interactive research was almost nonexistent. This is indicative of a presence with a reluctance to interact with those new to the home or facility. We feel that with time, this can be overcome. We would like to thank the Board of Directors of the Rose Theater for allowing us to perform research in this facility, and for their most gracious hospitality. We are looking forward to performing additional research in the facility in the spring of 2012.

John Combs
