

## Investigation Summary Report

Private Residence

Benton, LA

### HISTORY

Date of Investigation: August 14, 2010

Participants: Bess Maxwell, Tricia Grayson, James Palmer, John Combs

NOTE: The owners of this home have requested confidentiality. Some information may have been obscured to honor their request. This in no way affects the data presented, or any conclusions herein.

### BACKGROUND

From original investigation of 7/31/2010:

The current owners of this home have lived in this home for approximately four years. Some activity has been noticed since the original move in. The activity includes sighting of a female figure and the voices of children heard when none were around. Objects have been moved into locations they should not have been in. Lights have been turned off and on, sometimes in close sequence. There has been an on-going sense of a female spirit, and the feeling/sensations that this female wishes to communicate with the residents. Pets in the home are often observed watching things that the owners are not able to visually perceive. Lights have been seen in the corner of the master bedroom, in an area where no light fixtures are located. The perceived communications from the female spirit to the clients seems to indicate a need for the clients to seek or explore the area of the formal dining room.

Client wished us to follow up on August 14th, to see if additional data might be obtained.

EQUIPMENT: Infrared digital cameras and DVR system, digital still cameras, various EMF meters including Tri-Fields, various audio digital recorders, motion detectors, ion counters, digital thermometers, and PEAR REG-1 units for the detection of the presence of anomalous consciousness, with software and Hewlett-Packard computers.

### INVESTIGATION:

Personal Experiences : Investigator John Combs

1. At about 10: 20 PM, I had gotten a positive test (MasterBR1) from one of our REG-1 units in the master bedroom. I reset the unit to test again, using the timer to start about two minutes after leaving this area. Upon returning, the battery on this unit was 100% down, and the test never started. It therefore would have been drained in two minutes or less. This computer was 100% charged when testing started with this unit at 9:15 PM. This unit will give notice when the battery is low, and has about an average of 20 minutes use, after initial warning, which was not given prior to exiting the room. Normally, this unit will function, under similar use as the night of this investigation, for a minimum of 4 to 5 hours before discharge. This unit was further tested, and, under similar conditions, has now shown premature discharge. At the time of failure, the unit was in an area testing positive for an anomalous presence.

2. Just before midnight, in the same master bedroom, additional consciousness testing was being performed in various areas. Just as I was checking one of the computer units, and exiting the room, approximately four feet from the door going into the hallway, I walked through an extremely heavy cloud of perfume. As I am allergic to most fragrances of this nature, sneezing and allergic reactions began. Throughout the evening, earlier, no perfume was detected. The test conducted at the time the perfume was encountered, was a positive test for the presence of a consciousness, when no human consciousness was present. Investigator Bess Maxwell, approximately five minutes after the incident, was able to still detect a faint odor of the perfume. The fragrance was perceived as a heavy, floral type, which the client does not wear. In my lifetime of 60 years, I have never had an allergic reaction of sneezing, nor any other type, from simply thinking about, or having any false perceptions of perfume. I have no natural explanation for the sudden appearance of the olfactory sensation, and note the location of the perfume smell was in the same area I used to enter the room, e.g. same path, only a few minutes before, with no perceptions of fragrances of any type.

No anomalous motion, or hot/cold spots were detected. EMF fields were low, and no sudden spikes of EMF energy were noted. Ion counts were normal. Nothing was recorded as anomalous on video, or still photography. No EVP voices were recorded. Of the 47 tests performed for detection of anomalous consciousness, 18 were positive. Only 8 were noted on the last investigation.

## CONSCIOUSNESS DETECTION - PEAR UNITS / SOFTWARE

This testing is passive in nature and designed to statistically detect by probability, the presence of the human consciousness passively affecting REG-1 units by the quantum tunneling method, when all incarnate consciousness has been removed from the area. The minimum reporting standard for this type study is  $p < .05$ , with the .05 being the probability the event could be due to chance alone, the industry standard for this type research. A total of 47 tests were run. At the minimum reporting standard, we could expect to receive about 2.35 tests as false positives. ( $.05 \times 47 = 2.35$ ) The mean score of the 18 tests was .02125, so the corrected expectation for 47 tests would be .99922 false positive tests, about 1. ( $.02125 \times 47 = .99922$ ).

The test results were as follows:

Kitchen1	$z=2.031$	$p < .021127$
Kitchen3	$z= 1.752$	$p < .039973$
Kitchen4	$z= 2.530$	$p < .005703$
Kitchen6	$z= 2.066$	$p < .019414$
