

Investigation Summary Report

Private Residence Thibodaux, LA

HISTORY

We were contacted by a couple in Thibodaux who noticed an unusual imprint on their glass door. From the pictures that were sent in, the imprint resembled that of a detailed human face. The homeowners also experienced black shadow figures in the home as well as a full body apparition. Based on this information we decided to investigate.

Our night began around 8pm when we arrived at the home. We started our investigation by breaking up into teams of two and going lights out. It wasn't long before we began to notice shadows moving throughout the kitchen area of the home. After getting up to check it out and trying to debunk these shadows we were left with no answers as to what it may have been.

At another point in the night, while conducting audio recordings, I noticed the smell of food cooking. It wasn't long after my encounter that another investigator also stated she smelled food. This wasn't a smell that was present when we arrived and there was no food out or around at any point in the night. Another investigator heard a man's voice at one point while conducting an EVP session. After reviewing her voice recorder she was able to find the voice, which seemed to be male. The only man present in the home during the investigation was no where near the recorder at the time the voice was captured and the voices did not match.

Throughout the night we experienced battery drainage, cold spots, K2 spikes and an overall uneasy feeling in certain areas of the home. We had a very active night and hope to return for a follow up soon.
