

Investigation Summary Report

Private Residence Mansfield, LA

HISTORY

Date of Investigation: July 24, 2010

Participants: Bess Maxwell, James, John Combs

NOTE: The owners of this home have requested confidentiality. Some information may have been obscured to honor their request. This in no way affects the data presented, or the conclusions herein.

BACKGROUND

The house is made of wood, pier and beam construction. The current owners of the home have lived there in excess of twenty years. There have been two natural deaths in the home in that period. Pets in the home will on occasion bark and stare at an otherwise empty area of a room, refusing to leave this area. Client indicates this is rare, and not a part of the personality, or general behavior of the several dogs, over the years, exhibiting this behavior. There have been various sightings of a small girl appearing in various locations in the home, with occasional different dresses being worn. A male figure has both been spotted, and heard, as is whispering in the ear of an individual in bed. There have been numerous instances of the occupants experiencing the tactile sensation of being touched when no one is around, or in the area.

EQUIPMENT: Digital still cameras, digital IR video systems, digital audio recorders, various EMF meters including Tri-Fields, motion detectors, ion counters, digital thermometers, and PEAR REG-1 units for the detection of the presence of anomalous consciousness with software on Hewlett-Packard computers.

INVESTIGATION

No anomalous events were captured on video or still cameras. Ion counts were normal, and EMF readings were normal, with high readings only around AC appliances, as expected. None were in an area that could have affected an individual in a sleeping area. No anomalous motion

was noted. No unusually hot or cold areas were detected. No personal experiences of an unusual nature were noted.

CONSCIOUSNESS DETECTION: PEAR REG-1 UNITS / SOFTWARE

This testing is passive in nature and designed to statistically detect by probability the presence of a human consciousness passively affecting random number generators by quantum tunneling, when all incarnate consciousness has been removed from the area. The minimum reporting standard of this happening by chance alone, of $p < .05$, is the industry standard for this type of research. Our investigation performed 30 such tests, at various times and places. At the minimum reporting standard, we could expect to receive about 1.5 positive tests by chance alone. ($30 \times .05 = 1.5$). For the testing period, our actual average score on positive testing was $p < .0274392$, and this score $\times 30 = .82$ positive tests by chance alone, to be obtained. We actually obtained 5 positive tests, as follows:

MasterBR2	Z= 3.022	p< .001256
MiddleBR2	Z= 1.799	p< .036009
Bathroom1	Z= 1.696	p< .044943
FrontBR1	Z= 1.967	p< .024592
FrontBR4	Z= 1.875	p< .030396

The probability that all 5 of these tests were false positive, due to chance, and not due to the presence of a consciousness present at the time and place of testing, when these places were not human occupied, is:

$P < .00000000152$

CONCLUSION

There is reasonable probability, as indicated above that an anomalous presence was passively detected, at the probability indicated, and at the time and place of testing. No other active data was gathered, which leaves on the possibility of a chosen state of non-interaction by the detected presence. We would like to further study the reported phenomenon at this residence, and as we might be a more familiar presence ourselves on a second visit, we might be able to gather more interactive data, and/or further verify the presence of an anomalous consciousness.

We would like to thank the client for inviting us into this home, and allowing us to investigate the reported phenomena. We would also like to thank the client for the gracious hospitality, and hope that we may visit again soon.
