

INVESTIGATION SUMMARY REPORT

**PRIVATE RESIDENCE
MANSFIELD, LA.**

**JOHN COMBS
CASE MANAGER**

NOTE: THE CLIENTS IN THIS INVESTIGATION HAVE REQUESTED CONFIDENTIALITY. SOME OF THE DATA IN THIS REPORT MAY HAVE BEEN OBSCURED TO HONOR THEIR REQUEST. THIS IN NO WAY AFFECTS THE DATA PRESENTED, OR ANY CONCLUSIONS HEREIN. NO PHOTOS OF THE INTERIOR OR THE EXTERIOR OF THE RESIDENCE HAVE BEEN INCLUDED.

HISTORY

The home is a two-story, of brick construction. It was built in the 1930's, and the original owner was killed in an accident on the property, near his workshop. The home has had reports of unexplained phenomena throughout its history.

EXPERIENCES

The original owner was killed on his property, near his workshop in the garage. The current property owner has seen a male face through the window of the workshop, looking outward toward the home. This face is reported as consistent with the appearance of the original owner. The original owner's wife loved both flowers and perfume. The fragrance of both is often distinct in the downstairs parlor, where she loved to entertain. In the dining room, a presence is often felt, inside one's personal space, followed by the feeling of a breath on one's cheek or ear. An electrician and friend of the current owner was summoned to the residence to investigate reports of electrical problems. As he entered the hall, he heard a voice from the room where the electrical panel is located, summoning him to that room with a sense of urgency. The electrician knew he was there alone, but the strangeness of the summoning prompted him to investigate immediately. Once there, he noted the the electrical box was hot, and only moments away from starting a fire in the home. As he was about to finish and leave, he also heard the sound of a small drum being tapped upon, from the upstairs area. As he knew he was alone, he declined to go upstairs to investigate.

In the upstairs master bedroom, there is a button that activates a downstairs buzzer, to summon servants. The buzzer has been checked, and no malfunction that would cause it to activate due to malfunction has been found. In the evening hours, approximately at supper time, this buzzer has been known to buzz incessantly, in an attempt to summon servants that no longer work there. No one is seen in the upstairs area when it is checked for the anonymous summoner. The buzzer is only reported to begin its summoning during the supper time hours.

Those who are seated in the kitchen area, in the late evenings, are also tapped upon the shoulder, by an unseen hand. It would be speculative to indicate this as an additional form of summoning or personal reminder, but the hours are consistent with the summoning by buzzer.

INVESTIGATION

DATE OF INVESTIGATION: May 26th, 2012

PARTICIPANTS: JAMES PALMER, BESS MAXWELL, CONNIE WILLIAMSON, TRICIA GRAYSON, JOHN COMBS

EQUIPMENT: Digital Cameras, Infrared cameras and DVR system, Digital audio recorders, Ion Counters, P-SB7 Spirit Box, Infra-sound detection equipment, Digital thermometers, Various EMF meters including Tri-Fields, Motion detectors including geophone and laser grid systems, Ovilus interactive voice communications device, and PEAR REG-1 units for the detection of anomalous human consciousness with software on Hewlett-Packard computers.

INVESTIGATION: At the time and places tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid or geophone. No high EMF fields from AC current were found in any location likely to result in prolonged exposure, although there are some areas of high EMF fields from older wiring. No anomalous hot spots or cold spots were noted. No anomalous motions were noted. No EVP voices were recorded, or EVP words formed by the P-SB7. A limited amount of data was recorded from the Ovilus device. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas of testing. No inordinate positive ion counts were noted.

PERSONAL EXPERIENCES

JOHN COMBS - I had seven small computers on location for consciousness testing. The load upon these computers is similar, per investigation. These normally do not need to be hooked up to their respective chargers until about 1:30 to 2:00 A.M. At approximately 9:10 .M., the first computer failed with 100% battery drain, without the normal warning of such that usually appears prior to failure. I immediately connected it to a charger, and initiated testing. When I returned to check testing results, the test had been completed, indicating that it had been on charger for the testing period, as it would not have had time to recharge and function free-standing without a charger. However, the computer was off, 100% drained, and the charger unplugged from the computer. No one had been in the area other than myself, nor would have had reason to unplug the charger from the computer. After this event, at roughly 10 to twelve minute sequential intervals and in the upstairs area, 4 more computers were suddenly drained 100%, all without any warning that the computer was low on charge. It is noted that timing this was well below the normal time for normal discharge of these units. It is also noted that while I was checking on the third of the five sudden computer battery discharges, my flashlight, fully charged with new batteries, went from fully charged to completely drained in approximately two seconds, while I was holding the light.

PART TWO

Consciousness Detection

This type of testing is passive in nature and designed to detect, through the quantum tunneling method, the probability that a human type consciousness may be present affecting the REG-1 units, when all incarnate consciousness has been removed from the areas of testing.. The minimum reporting standard for this type testing is $p < .05$, with p (probability) representing the chance that the event could be the result of chance alone in the probability distribution. Thus, the probability of an anomaly is 95% per test, or greater, to be considered statistically significant. We then compute the probability that all tests are false, that is, that none of the tests indicate an anomaly.

A total of 88 tests were run in all areas. At the minimum reporting standard of .05, we would expect to receive a total of 4.4 tests (5.0) due to chance alone affecting the probability distribution, resulting in 4.4 (5.0) false positives for the human consciousness being the cause. ($88 \times .05 = 4.4$) The actual mean score for the 62 positive tests was $p < .022653$. The correction for the number of expected false positives would be $88 \times .022653 = 1.99$ false positives, which we would round up to 2. As noted, we received 62 positives, much greater than the mathematically expected 2 if only chance were involved.

After the room designation, the number or alpha character designates the test number or sequence in that room, on that particular testing computer.

EXAMPLE: BRThree1 Bedroom number three, test number one.

The test scores are as follows:

COMPUTER 1

Workshop1	$z = 2.623$	$p < .004358$
Workshop3	$z = 2.426$	$p < .007633$

PART THREE

The Ovilus

Carl Jung, Swiss psychiatrist and the father of analytical psychiatry, coined the word “synchronicity”.

Synchronicity - The experience of two or more events, that are apparently causally unrelated or unlikely to occur together by chance, that are observed to occur together in a meaningful manner.

This concept does not question or compete with the notion of causality. Instead, it maintains that just as events may be grouped by cause, they may also be grouped together by meaning. Since meaning is a complex mental construction, subject to both conscious and unconscious influence, not every correlation in the grouping of events by meaning needs to have an explanation of cause and effect.

NOTE: In the paranormal, there are many experiences which are noted and observed for which the laws of science, as we know and understand them at this time, cannot explain. In EVP studies, blank and sealed cassette tapes have been found to have EVP voices on them, without having been previously inserted into a recorder. The actual method of the sending of EVP voices remains unknown. Television sets, while turned off, have had faces of the deceased plainly visible, as if the set were on. Telephone calls with the caller having the voice and knowledge of a deceased individual have been heavily documented. Phone calls and text messages have been sent to cell phones which have no SIM card to properly receive calls, but do receive the anomalous calls. We simply do not know, at this time, exactly how these events occur or are possible.

In paranormal research, it is the reporting of these cases that is important. These and similar phenomena are reported by individuals who have never met or known each other, and live thousands of miles apart, and often hundreds of years. Yet the reports remain consistent. Case studies, in volume and over time, allow for hypotheses and theories. It is in this simple interests of reporting that this section is included.

The Ovilus is a device that intercepts EMF signals, and converts them to audio, from an internal dictionary of over 2,000 words. It is theorized that discarnate entities may be able to INFLUENCE, under some circumstances, this word selection process. It is not thought, in the majority, that these entities may exert 100% CONTROL over the word selection, and simple research and listening to the output of the device verifies this, to the normal and reasonable individual. It is also noted that coincidence may play a part in the process, with the probability of about 1 in 2,047, in getting a correct response to a direct question. It is only in the long term studies, with consistent reporting, that more exacting theories regarding coincidence versus influence may be formulated. Probability, from a math standpoint, rises sharply as valid answers are observed in larger quantity, over a brief period of time and small number of total responses. For example, the probability of getting two correct responses in a row is 1 in 4,190,209. ($1/2047 \times 1/2047$) This assumes there is only one correct response per each individual question.

The manufacturer of the Ovilus device indicates at the present time, there is insufficient data, science, and case study to indicate the Ovilus data should be evidential. This author agrees. This case study is not presented as hard evidence. It is presented so that others may have and consider its merits, or lack thereof. If no reporting is made, no theories may be formulated, or comparisons made with other reports to study correlations, if any. Each person who reads Part

Three must consider this data in light of his own beliefs, or knowledge of events that are known to have occurred to them personally. Beauty here is truly in the eye of the beholder, or its lack thereof.

SUMMARY OF INTRODUCTION - PART THREE - The data presented here on Part Three IS NOT CONSIDERED EVIDENTIAL by the manufacturer of the Ovilus device or the La. Spirits North Team. It is simply included in the interests of completeness of events, and for study/research purposes only.

CLOSING NOTES – PART THREE

There may have been additional incidents, or not. We have presented these incidents in Part Three in the interests of research and completeness of studies performed. It is acknowledged that answers may, in many cases, rely on judgment as to the accuracy of the answer. If the question, “Is the car red?” is posed, assuming the car’s color is not a transition color, the answer of either “yes” or “no” may be easily evaluated. Or, assuming no transition color, the answer to “What color is the car?”, the answer “red” may be easily evaluated. Others are not so simple, “Happy”, for example. And it is readily acknowledged that those hearing a response from an Ovilus device may NOT have sufficient knowledge to correlate a given answer as relevant or “correct”. The volume of comments received from the Ovilus device was very large, and there may be meanings that those of us not experiencing daily life at this home, or intimately familiar with its history, do not have a connotation for. The list is presented as received, in proper order, in the interest of completeness of research conducted. It is also noted that, although the words are spoken individually, there may be meanings or connotations in word groupings within word lists. These meanings or connotations may only be meaningful to certain individuals with the experiences to which these word phrases pertain, and not to all individuals. Words within the list that have an inordinate statistical frequency of appearance may also fall within the meaningful category, and need to be analyzed by those with a more intimate knowledge of the history of the location.

**END
PART THREE**

PART FOUR

THE MODEL P-SB7 SPIRIT BOX

This device utilizes a milli-second adjustable forward or reverse sweep technique coupled with a white noise distribution between frequency steps. This is designed to add ambient sound energy for the production of real time EVP, allowing for instant feedback in communications attempts. See item 16 in “General Parameters of the EVP Phenomenon”.

CLIP ONE: Bess Maxwell and Connie Williamson are in the former law office area. Bess asks, “Can you say one of our names?”, and an anomalous voice says, “Bess”.

CLIP TWO: Recorded by Connie Williamson. The house is open, and sounds carry very well. An anomalous voice quips, “Crash, John”.

PART FIVE BROWN REPORT

THEORETICAL EFFECTS OF ENVIRONMENTAL ENERGY ON PARANORMAL PHENOMENA

Over many years, there seem to be consistent reports from individuals who live many miles, and often, many years apart concerning a correlation between extra energy in the environment and a perceived increase in paranormal activity. It is readily acknowledged that the sun is the greatest source of energy in our solar system, and this energy is in a constant state of flux. When solar energy is increased through solar flares, and other types of solar activity, the number of reports of paranormal activity increases. These flares and eruptions cause x-ray events, radio events, proton flux, electron flux, and geomagnetic impulses. It is readily acknowledged that these effect everything on our planet from weather, to satellite communications, disruptions in electrical grids, and even the flow in pipelines. These events also result in what is known as geomagnetic induced currents (gic) or telluric currents in the earth's crust, and waterways. These electrical flows tend to go toward the sun in general, as well as toward the equator in the daytime, and the poles at night.

We do not, at this time, totally understand how environmental energy sources can effect paranormal phenomena in a direct manner, or even if they do. Also, this author readily concedes that if paranormal activity is increased by local energy, that solar energy is not the only available source of local energy; it is just the most prevalent. If this relationship does exist, it would support the general observations of myself and others of a propensity of paranormal activity to be detectable in areas where water and large quartz deposits are found, as these would be conductors for the telluric currents, thus making energy readily available.

This author feels that in order to perform research on the correlations of solar weather and paranormal activity, long term case studies offer the best method, as of this time, to find support, or to deny, this hypothesis. Therefor, data concerning solar weather for the date of our paranormal investigations will be supplied, with no efforts made to draw conclusions thereof, either positive or negative. This data is provided by the National Oceanic and Atmospheric Administration. The NOAA also readily states that the total effects of space weather on live biological entities on planet earth is not known or understood at this time, either.

If an attached graph does not show activity on the date and/or time of our investigation, it does not mean that there was no solar activity, but the the solar activity at this time was considered normal.

CONCLUSION: This data is not meant to conclusively show that any paranormal activity, or lack thereof, found on our investigation was caused by the solar activity at that time, but that there could possibly have been an influence by the solar weather at this time, positively or negatively correlated to the strength of such solar weather. Other such energy systems as lunar cycles, thunderstorms, and utility networks may provide an alternative energy supply for paranormal phenomena.

ACTIVITY: HIGHER THAN NORMAL
END
PART FOUR

CONCLUSION

At the time and places tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid or geophone. No high EMF fields from AC current were found in any location likely to result in prolonged exposure, although there are some areas of high EMF fields from older wiring. No anomalous hot spots or cold spots were noted. No anomalous motions were noted. No EVP voices were recorded. No recordings were made of words formed by the P-SB7. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas of testing. The consciousness testing was strong, and consistent in many areas. We feel that the personal experiences, and the positive tests received in the PEAR testing are probably indicative of an anomalous presence or presences. We also note that the consciousness testing was noted at a very high level in both quantity and quality.

We would like to thank the clients for inviting us into their home, and for the opportunity to study the phenomena there. We would also like to thank them for their most gracious hospitality, and hope that we may be able to return there again soon.
