

Investigation Summary Report

Private Residence

Monroe, LA

HISTORY

DATE OF INVESTIGATION: December 4th, 2010

PARTICIPANTS: Kirk Cormier, Bess Maxwell, Keith Myers, Traci Myers

NOTE: The clients in this investigation have requested confidentiality. Some information may have been obscured to honor this request. This in no way affects the data presented, or any conclusion herein.

BACKGROUND

The clients have lived in this home for about four months. Interviews with several neighbors, long-time residents of the neighborhood and otherwise credible, indicate that the average tenant stays for only a few months, and this cycle has repeated for a number of years. The condition of the neighborhood, nor the residence, would be indicative of this phenomenon.

The clients generally report seeing shadow forms, and figures, in various areas of the home. Voices are often heard, when no one is in the area the sounds originate from. Some objects have been unexplainably moved, and a sensation of the presence of an unseen person is felt. Cabinet doors, otherwise secure and not subject to movement by air currents or vibrations, have been noted to open and/or close.

The home has had one natural death, and two from violence.

The clients, at the time of the investigation, felt that the heavy atmosphere of uncertainty and fear was increasing, and were in process of moving to another home.

EQUIPMENT: infrared digital video system and infrared cameras, digital still cameras, motion detectors, digital thermometers, various EMF meters including Tri-Fields, ion counters, infrasound detection equipment and software, various digital audio recorders, and PEAR REG-1 units with Hewlett-Packard computers/software for the detection of the presence of anomalous human consciousness.

INVESTIGATION

At the time of testing, and in the places tested, no infra-sound was detected, no positive ion counts above normal were found, no anomalous temperature changes were noted, except as personal experience EMF fields were low to normal and no anomalous spikes in EMF were noted, except in the master bedroom personal experience. No anomalous motions were detected by the detectors, nor any digital still phenomena photos obtained. No anomalies were recorded on video.

One personal experience was noted by investigator Traci Myers, attempting to gather data from the closet in the master bedroom, where the REG-1 unit had earlier registered a positive event. Traci noted that the light in the closet dimmed considerably, without the lighting in the bedroom decreasing, with a change in the general atmosphere of the closet area to a heavier type atmosphere. This lasted about ten seconds, as the shadow seemed to leave the closet door, Traci and both clients noted a solid detection by the K-2 unit there. Traci felt as if, during the experience, the temperature of the closet seemed to rise noticeably. This temperature increase, was not documented scientifically. It's possible that the enclosed space (no room to accommodate the fight or flight syndrome) and perceptions of unknown change could have caused a rise in body temperature, via limbic system response to a sudden unknown/unexplainable event. Neither explanation, actual temperature rise or limbic response, can be validated or ruled out.

PEAR ANALYSIS

This type of testing is passive in nature, and is designed to detect by probability the presence of a human consciousness interacting with binary random number distributions in a REG unit, by the quantum tunneling method, when all incarnate human consciousness has been removed from the testing areas. The minimum reporting standard is $p < .05$, with the .05 being the probability that the recorded event could be due to chance alone in the random number distribution being tested. A total of 49 tests were run. At the minimum reporting standard, we could expect to receive 2.45 tests as positive, but due to being generated by chance alone. ($49 \times .05 = 2.45$) Using the average acceptable score actually obtained in the series of 15 positive tests, $p < .026248$, we would expect to receive only 1.29 tests by chance distribution. ($49 \times .026048 = 1.29$) As stated above, 15 positive results were obtained, when chance alone would dictate only 1.29. The areas which tested positive, and the probability scores are as follows:

MasterBR, Closet	$z = 1.771$	$p < .03828$
Den1	$z = 2.285$	$p < .011156$
Den3	$z = 2.188$	$p < .014334$
Den4	$z = 1.831$	$p < .03355$
Den7	$z = 2.152$	$p < .015699$
Washroom1	$z = 2.141$	$p < .016137$
Washroom3	$z = 2.089$	$p < .018354$
Washroom4	$z = 1.838$	$p < .033031$
MainBath1	$z = 1.876$	$p < .030328$
Poolroom3	$z = 2.085$	$p < .018535$
MasterBR4	$z = 1.754$	$p < .033715$
KitchenA	$z = 1.730$	$p < .041815$

KitchenB	z= 1.646	p< .049882
Kitchen3	z= 2.066	p< .019414
Kitchen4	z= 2.212	p< .013483

NOTE: Due to multiple computers, often covering similar areas, some areas may have a test number, and the same area may also have an alpha designation, such as “Kitchen, Test A” or “Kitchen2”.

The probability that these 15 tests are all false positives generated by random numbers rather than the presence of an anomalous human consciousness operating through quantum tunneling is:

.00000000000000000000000000384464

CONCLUSION

At the time of testing, and in the places tested, no interactive data was gathered. Neither passive data of general nature, nor data from normal false positives (infrasonic, high positive ion counts, etc) was noted. Only the passive data for the detection of the human consciousness with no incarnate consciousness present, was significant. This passive data was highly statistically significant.

We at Louisiana Spirits would like to thank the clients for inviting us into their home, for allowing us to study the reported phenomena therein, and for their most gracious hospitality. We hope we may return again, soon. We remain always available to answer questions, consultations, or provide assistance as necessary.
