

## Investigation Summary Report

### Private Residence Shreveport, LA

#### HISTORY

PRIVATE RESIDENCE  
SHREVEPORT, LA.

DATE OF INVESTIGATION: DECEMBER 10th ,2011

PARTICIPANTS: BESS MAXWELL, TRACI MYERS, KEITH MYERS, JOHN COMBS

NOTE: The clients in this home have requested confidentiality. Some of the information in this report may have been obscured to honor their request. This in no way affects the data presented, or the conclusions herein.

#### BACKGROUND

This home is wooden, on pier and beam construction. It was built in the 1930's. The living area is single story, though there is an attic accessible by staircase. The clients, husband and wife, have lived here for approximately two years, and have three teenage children. The clients have lived in the general area for many years, and were familiar with the reputation of their current home as one having strange phenomena occur, before moving into the home. Several neighbors were interviewed and attested to the home's general reputation for strange events. As the clients were moving in, as one of the teenagers was moving boxes up into the attic, she spotted a female form at the top of the stairs in the attic. The same teenager, the next day, saw the same female form along with a male, and a small child in the attic, the next day. This teenager was not aware of any previous sightings of this trio. The next door neighbor once lived in this home, and had several friends, without her consent, use a Ouija board in an attempt to summon spirits. This board, as it was used in the home, had previously been used in various graveyards in Shreveport, in an attempt to summon spirits. It is rumored that they had summoned or had otherwise seen a female form, a male form, and a small child in the attic after a session on the Ouija board, wearing clothing and with the general appearance as described by the teenager at a later time.

This same teenager saw a male form outside her bedroom window one morning, early. The male form was seen from the waist up, then vanished. The window is elevated, such that someone outside, not using a ladder or similar, could be seen only from the chin upward, and there is nothing readily or normally available in this location to stand on, looking into the window. The form also vanished, not consistent with stepping off a ladder or other elevated object. The current clients are storing the ashes of a cremated individual, in their home. This teenager, while looking at photographs at a later time, spotted an image, and identified it as the man seen outside her window. This was a photo of the cremated individual whose ashes are currently stored in the home. The viewing of these photos was casual, and not for the purposes of identifying the individual seen outside the window. It is also noted that the bedroom is a later addition to the home. There are two additional rooms added, a bedroom on the back left, and a washroom. The back bedroom has a heavy oppressive atmosphere, and is noted for having cold spots, not explainable by air conditioning or heating failures. The washroom has a heavy atmosphere, and none of the clients' three dogs will stay or cross through this area unless forced to do so. None of the three dogs have any problems with any other area in the home.

The wife, female client, has had someone whisper into her ear, while working on the computer in the dining area, with no one visible to have done so. On the day of our investigation, 2 of the dinette chairs were moved around while the clients were gone, no one home at all to have moved these chairs. The night before, the husband spotted a form consistent with a small child, age 8 to 9, move down the hallway. The husband was seated in a recliner in the master bedroom, with a clear view of the hallway. There is no one of this age in the family, and no one of that age visiting at the time. All members of the household report regular, repeated drain of batteries in all areas of the home. This includes rechargeable batteries, such as in cell phones. When away from home, the batteries last for days. At home, even fully-charged batteries last less than one hour, even without use of the phone, etc.

EQUIPMENT: Digital Cameras, Infrared cameras and DVR system, Digital audio recorders, Ion Counters, P-SB7 Spirit Box, Infra-sound detection equipment, Digital thermometers, Various EMF meters including Tri-Fields, Motion detectors including geophone and laser grid systems, Ovilus interactive voice communications device, and PEAR REG-1 units for the detection of anomalous human consciousness with software on Hewlett-Packard computers.

## INVESTIGATION

At the time and places tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid or geophone. No high EMF fields from AC current were found in any location likely to result in prolonged exposure, although there are some areas of high EMF fields from older wiring. No anomalous hot spots or cold spots were noted. No anomalous motions were noted. Two EVP voices were recorded and several recordings were made of words formed by the P-SB7. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas of testing.

## PERSONAL EXPERIENCES

JOHN COMBS: About 9:00 PM, I entered bedroom number three to reset a computer that was performing testing for consciousness detection. The computer was on the bed, near the head of the bed, and was to the left on the door entering this bedroom. I knelt onto the carpet for easy access. The door to this bedroom was closed, about three feet behind me, slightly to my right and

to the rear. Bedroom number four was to my right, about 8 to 10 feet away. This door was closed, and the only access to bedroom four is the door, through bedroom three. As I was resetting the testing, lights out, the common door between bedroom three and bedroom four opened. This was slightly out on range of my vision, to my right. The door from the hallway into bedroom three, where I was, remained closed. I heard footsteps approaching from bedroom four toward me, and these steps did not seem unusual. I assumed that another investigator had been in bedroom four when I walked into bedroom three. It is noted that when walking on this floor, carpeted, the normal weight of the foot onto the carpet/wood floor does not make a noise consistent with weight being applied to the floor. The noise I heard was consistent with feet being dragged across the carpet, a swishing type of step, but each step was distinct. As I looked up, no one was to be seen, and a thorough search of the two bedrooms did not reveal anyone other than myself. The door to/from the hallway remained closed the entire time. The opening of the common door, and the sound of feet moving across the nap of the carpet remains unexplained.

At about 11:00 PM, I again returned to bedroom three, to reset a computer performing consciousness testing. As I looked at the test just completed, the results were positive for a presence at the time of testing. My flashlight, with new batteries, was immediately extinguished with battery drain. The batteries, only an hour or so old, were not showing signs of deterioration or stress seconds before, and the drain was sudden, as if the light had been turned off. It would not come back on, and the replacement batteries performed perfectly.

BESS MAXWELL, TRACI MYERS, KEITH MYERS, CLIENT: All were in the master bedroom at about 8:15 PM. The client thought she heard a deep male voice behind her. At the same time, Keith Myers battery on his camera drained completely. Investigator Bess Maxwell felt and experienced a deep, cold chill. EVP Two EVP voices were recorded by Traci Myers.

1. In the attic, Bess Maxwell asks, "Do you hide in the attic because you are scared?". A very faint anomalous voice seems to say a soft "maybe".
2. In one of the bedrooms, Bess Maxwell asks, "Steve, are you here?". An anomalous voice replies "Come back".

## PART TWO

### Consciousness Detection

This type of testing is passive in nature and designed to detect, through the quantum tunneling method, the probability that a human type consciousness may be present affecting the REG-1 units, when all incarnate consciousness has been removed from the areas of testing. The minimum reporting standard for this type testing is  $p < .05$ , with  $p$  (probability) representing the chance that the event could be the result of chance alone in the probability distribution. Thus, the probability of an anomaly is 95% per test, or greater, to be considered statistically significant. We then compute the probability that all tests are false, that is, that none of the tests indicate an anomaly.

A total of 67 tests were run in all areas. At the minimum reporting standard of .05, we would expect to receive a total of 3.35 tests (4.0) due to chance alone affecting the probability distribution, resulting in 3.35 false positives for the human consciousness being the cause. ( $67 \times .05 = 3.35$ ) The actual mean score for the 30 positive tests was  $p < .028262$ . The correction for the number of expected false positives would be  $67 \times .028262 = 1.89$  false positives, which

END OF PART TWO

## PART THREE

### The Ovilus

SUMMARY OF INTRODUCTION - PART THREE - The data presented here on Part Three IS NOT CONSIDERED EVIDENTIAL by the manufacturer of the Ovilus device or the La. Spirits North Team. It is simply included in the interests of completeness of events, and for study/research purposes only.

OVILUS SESSION – BEDROOM ONE (No significant data collected)

Whose - We asked for one of the investigators names to be announced and the Ovilus replied “whose”.

Beast – We asked the name of the cremated individual whose ashes currently were on the fireplace, and the Ovilus replied “Beast”. This is the correct nickname for this individual.

### CLOSING NOTES - PART THREE

There may have been additional incidents, or not. We have presented these incidents in Part Three in the interests of research and completeness of studies performed. It is acknowledged that answers may, in many cases, rely on judgment as to the accuracy of the answer. If the question, “Is the car red?” is posed, assuming the car’s color is not a transition color, the answer of either “yes” or “no” may be easily evaluated. Or, assuming no transition color, the answer to “What color is the car?”, the answer “red” may be easily evaluated. Others are not so simple, “Happy”, for example. And it is readily acknowledged that those hearing a response from an Ovilus device may NOT have sufficient knowledge to correlate a given answer as relevant or “correct”. The volume of comments received from the Ovilus device was very large, and there may be meanings that those of us not experiencing daily life at this home, or intimately familiar with its history, do not have a connotation for. The list is presented as received, in proper order, in the interest of completeness of research conducted. It is also noted that, although the words are spoken individually, there may be meanings or connotations in word groupings within word lists. These meanings or connotations may only be meaningful to certain individuals with the experiences to which these word phrases pertain, and not to all individuals. Words within the list that have an inordinate statistical frequency of appearance may also fall within the meaningful category, and need to be analyzed by those with a more intimate knowledge of the history of the location.

END PART THREE

### PART FOUR

#### THE MODEL P-SB7 SPIRIT BOX

This device utilizes a milli-second adjustable forward or reverse sweep technique coupled with a white noise distribution between frequency steps. This is designed to add ambient sound energy for the production of real time EVP, allowing for instant feedback in communications attempts. See item 16 in “General Parameters of the EVP Phenomenon”. There were four instances of

words formed from the chopped sounds of the P-SB7 that seemed to be meaningful, and possibly the result of intent to communicate. All four were from a session in the attic. Present were Bess Maxwell (experimenter), Keith Myers, Traci Myers, and a daughter of the clients.

One: Bess Maxwell says, "You can use this device to talk to us". Five seconds later the word "John" is spoken.

Two: About 1 minutes later the word "John" is spoken again.

Three: Bess Maxwell comments, "We can't help you unless you'll talk to us". About 9 seconds later the anomalous word "help" is spoken, and Bess repeats that word.

Four: Bess Maxwell Comments, "If we know your name, we can talk to you a little better". Twelve seconds later a voice says, "I am Gilman".

## CONCLUSION

At the time and places tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid or geophone. No high EMF fields from AC current were found in any location likely to result in prolonged exposure, although there are some areas of high EMF fields from older wiring. No anomalous hot spots or cold spots were noted. No anomalous motions were noted. Two EVP voices was recorded, and several recordings were made of words formed by the PSB7. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas of testing. The consciousness testing was strong, and consistent in many areas. We feel that the personal experiences, and the positive tests received are probably indicative of an anomalous presence or presences. We would like to thank the clients for inviting us into their home, and for the opportunity to study the phenomena there. We would also like to thank them for their most gracious hospitality, and hope that me may be able to return there again soon.
