

## Investigation Summary Report

Private Residence  
Slidell, LA

### HISTORY

We arrived at the residence shortly after 8:00pm on 10/10/2008 . There were 2 investigators present for this particular investigation due to the size of the house. We started the night by speaking with the home owner and putting a digital recorder in the back bedroom where most of the activity is reported and going "lights out". While we were talking and when the home owner and one investigator were in the back room setting things up there, I got several KII meter spikes. After doing a "sweep" of the living room I could not find an explanation for the sudden spikes. As the night progressed we had a few personal experiences, from knocks to shadows. At one point in the night an investigator thought she heard someone shush her from the back of the house. After going over all of the audio and pictures captured that night we unfortunately did not capture any of the voices that have been heard or the figure in white that was reported to be seen in the front of the home. The only thing on the recording that we could not explain is a strange scraping noise coming from the back of the house when no one was present. After speaking with the home owner he indeed told me that he went to the room where the noise came from and was able to recreate the noise by dragging a stool from the bathroom across the floor.

At this time we can not say that there is anything present in the house due to only being there a short while and not capturing substantial evidence of paranormal activity. We would like to thank the home owners for having us out and being so kind.
