

INVESTIGATION SUMMARY REPORT

PRIVATE COMMERCIAL BUILDING SHREVEPORT, LA.

**JOHN COMBS
CASE MANAGER
LA. SPIRITS NORTH TEAM**

NOTE: The clients in this investigation have requested confidentiality. Some of the data may have been obscured to honor their request. This in no way affects the data presented, or any conclusions herein.

HISTORY

BACKGROUND: This three story building was constructed in the early 1900's. It has housed a grocery business, a mercantile operation, a hotel, a brothel, and many more businesses over the years.

EXPERIENCES

There are reports of footsteps being heard in otherwise unoccupied areas. Voices and conversations have been heard originating from areas with no one in these areas to speak. Some objects have been moved, and the sound of something being dragged around on the floor has been noted, in areas in which were not occupied when the noises were heard. There is often the feeling of a nearby presence, with no one there to be seen.

INVESTIGATION

DATE OF INVESTIGATION: NOVEMBER 09th, 2014

PARTICIPANTS: Bess Maxwell, Connie Williamson, Keith Myers, Traci Myers, Kirk Cormier, and John Combs

EQUIPMENT: Digital cameras, digital audio recorders, various EMF meters including Tri-Field, motion detectors, laser grid systems, P-SB7 Spirit Box, digital thermometers, Rem-Pod EMF detectors, infrared DVR cameras and recorder, Flir thermal camera, ion counters, infrasound testing equipment, Ovilus interactive voice communication devices, geophone vibration detection equipment, PEAR REG-1 units for the detection of anomalous human consciousness with software on Hewlett Packard Computers.

INVESTIGATION: At the time and places tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid or geophone. No high EMF fields from AC current were found in any location likely to result in prolonged exposure, although there are some areas of high EMF fields from wiring. No anomalous hot spots or cold spots were noted. No anomalous motions were noted. Seven EVP voices of words formed by the P-SB7 were recorded, and one standard EVP voice was digitally recorded without intentionally adding energy during recording. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas of testing.

PERSONAL EXPERIENCES

JOHN COMBS - At about 5:30 PM, I walked out of the meeting room, and distinctly heard footsteps in the kitchenette, just around the corner. I immediately turned the corner, and the kitchenette, and the

office just to the right were empty. I was the only person on the second floor at this time.

TEAM: Throughout the evening, team members heard objects drug across the floor in rooms that had no one in them to move anything around, and subsequent, quick inspections of these empty rooms did not reveal any objects that seemed to have been moved.

TRACI MYERS and CONNIE WILLIAMSON - Shortly after 7:00 PM, both were in a third floor office, and had several knocks on a wall in that room, with no one on the other side of the wall to have done so. These knocks were consistent with the sound of knuckles knocking on a wall.

PART TWO

Consciousness Detection

This type of testing is passive in nature and designed to detect, through the quantum tunneling method, the probability that a human type consciousness may be present affecting the REG-1 units, when all incarnate consciousness has been removed from the areas of testing.. The minimum reporting standard for this type testing is $p < .05$, with p (probability) representing the chance that the event could be the result of chance alone in the probability distribution. Thus, the probability of an anomaly is 95% per test, or greater, to be considered statistically significant. We then compute the probability that all tests are false, that is, that none of the tests indicate an anomaly.

A total of 80 tests were run in all areas. At the minimum reporting standard of .05, we would expect to receive a total of 4.0 due to chance alone affecting the probability distribution, resulting in 4 false positives for the human consciousness being the cause. ($80 \times .05 = 4.0$) The actual mean score for the 34 positive tests was $p < .025747$. The correction for the number of expected false positives would be $80 \times .025747 = 2.06$ false positives, which we would round up to 3. As noted, we received 34 positives, much greater than the mathematically expected if only chance alone were involved.

After the room designation, the number or alpha character designates the test number or sequence in that room, on that particular testing computer.

EXAMPLE: BRTHREE1 Bedroom number three, test number one.

COMPUTER 1

Front Main Office 1	$z = 2.146$	$p < .015936$
Front Main Office 2	$z = 2.185$	$p < .014444$
Architectural 1	$z = 1.823$	$p < .034152$
Gregg Office 2	$z = 1.780$	$p < .037538$
Entry Hall 2	$z = 1.874$	$p < .030465$

COMPUTER 4

Kitchenette 2	$z = 1.921$	$p < .027366$
Wade Office 2	$z = 2.216$	$p < .013345$
File Room 2	$z = 2.328$	$p < .009956$

COMPUTER 7

Meeting Room 2	$z = 2.597$	$p < .004702$
Reception Area 2	$z = 1.822$	$p < .034227$
Copy Room 2	$z = 1.856$	$p < .031727$

The probability that these 11 tests are all false positives, due to chance alone in the probability distributions, and not indicative of human consciousness interaction when none incarnate was present to do so, through quantum tunneling is:

PROBABILITY

.00000000000000000000167

ANOTHER WAY OF EXPRESSING THIS NUMBER IS

1.67 X 10 TO THE -19th POWER

PART TWO**

PART THREE

The Ovilus

Carl Jung, Swiss psychiatrist and the father of analytical psychiatry, coined the word “synchronicity”.

Synchronicity - The experience of two or more events, that are apparently causally unrelated or unlikely to occur together by chance, that are observed to occur together in a meaningful manner.

This concept does not question or compete with the notion of causality. Instead, it maintains that just as events may be grouped by cause, they may also be grouped together by meaning. Since meaning is a complex mental construction, subject to both conscious and unconscious influence, not every correlation in the grouping of events by meaning needs to have an explanation of cause and effect.

NOTE: In the paranormal, there are many experiences which are noted and observed for which the laws of science, as we know and understand them at this time, cannot explain. In EVP studies, blank and sealed cassette tapes have been found to have EVP voices on them, without having been previously inserted into a recorder. The actual method of the sending of EVP voices remains unknown. Television sets, while turned off, have had faces of the deceased plainly visible, as if the set were on. Telephone calls with the caller having the voice and knowledge of a deceased individual have been heavily documented. Phone calls and text messages have been sent to cell phones which have no SIM card to properly receive calls, but do receive the anomalous calls. We simply do not know, at this time, exactly how these events occur or are possible.

In paranormal research, it is the reporting of these cases that is important. These and similar phenomena are reported by individuals who have never met or known each other, and live thousands of miles apart, and often hundreds of years. Yet the reports remain consistent. Case studies, in volume and over time, allow for hypotheses and theories. It is in this simple interests of reporting that this section is included.

The Ovilus is a device that intercepts EMF signals, and converts them to audio, from an internal dictionary of over 2,000 words. It is theorized that discarnate entities may be able to INFLUENCE, under some circumstances, this word selection process. It is not thought, in the majority, that these entities may exert 100% CONTROL over the word selection, and simple research and listening to the output of the device verifies this, to the normal and reasonable individual. It is also noted that coincidence may play a part in the process, with the probability of about 1 in 2,047, in getting a correct response to a direct question. It is only in the long term studies, with consistent reporting, that more exacting theories regarding coincidence versus influence may be formulated. Probability, from a math standpoint, rises sharply as valid answers are observed in larger quantity, over a brief period of time and small number of total responses. For example, the probability of getting two correct responses in a row is 1 in 4,190,209. ($1/2047 \times 1/2047$) This assumes there is only one correct response per each individual question.

The manufacturer of the Ovilus device indicates at the present time, there is insufficient data, science, and case study to indicate the Ovilus data should be evidential. This author agrees. This case study is not presented as hard evidence. It is presented so that others may have and consider its merits, or lack thereof. If no reporting is made, no theories may be formulated, or comparisons made with other reports to study correlations, if any. Each person who reads Part

Three must consider this data in light of his own beliefs, or knowledge of events that are known to have occurred to them personally. Beauty here is truly in the eye of the beholder, or its lack thereof.

SUMMARY OF INTRODUCTION - PART THREE - The data presented here on Part Three IS NOT CONSIDERED EVIDENTIAL by the manufacturer of the Ovilus device or the La. Spirits North Team. It is simply included in the interests of completeness of events, and for study/research purposes only.

**END OF OVILUS WORD LIST
CLOSING NOTES – PART THREE**

There may have been additional incidents, or not. We have presented these incidents in Part Three in the interests of research and completeness of studies performed. It is acknowledged that answers may, in many cases, rely on judgment as to the accuracy of the answer. If the question, “Is the car red?” is posed, assuming the car’s color is not a transition color, the answer of either “yes” or “no” may be easily evaluated. Or, assuming no transition color, the answer to “What color is the car?”, the answer “red” may be easily evaluated. Others are not so simple, “Happy”, for example. And it is readily acknowledged that those hearing a response from an Ovilus device may NOT have sufficient knowledge to correlate a given answer as relevant or “correct”. The volume of comments received from the Ovilus device was very large, and there may be meanings that those of us not experiencing daily life at this home, or intimately familiar with its history, do not have a connotation for. The list is presented as received, in proper order, in the interest of completeness of research conducted. It is also noted that, although the words are spoken individually, there may be meanings or connotations in word groupings within word lists. These meanings or connotations may only be meaningful to certain individuals with the experiences to which these word phrases pertain, and not to all individuals. Words within the list that have an inordinate statistical frequency of appearance may also fall within the meaningful category, and need to be analyzed by those with a more intimate knowledge of the history of the location.

PART FOUR

THE MODEL P-SB7 SPIRIT BOX

This device utilizes a milli-second adjustable forward or reverse sweep technique coupled with a white noise distribution between frequency steps. This is designed to add ambient sound energy for the production of real time EVP, allowing for instant feedback in communications attempts. See item 16 in “General Parameters of the EVP Phenomenon”.

FIRST THREE CLIPS RECORDED BY BESS MASXWELL

**CLIP ONE: TEAM MEMBERS WERE SKING FOR THE NAME OF ANYONE PRESENT, FEELING THAT THERE COULD BE AN ED JACOBS PRESENT.
MALE VOICE - “ED.”**

**CLIP TWO: TEAM MEMBERS ASKED IF ANYONE WAS WITH ED, AND TRIED TO GET ED TO ALLOW THESE TO SPEAK.
FEMALE VOICE - “SORRY.”**

**CLIP THREE: CHERYL WHITE ATTEMPTS TO COMMUNICATE WITH ED.
CHERYL WHITE - “WHAT WAS THE LAST BUILDING YOU OWNED IN SHREVEPORT?”
MALE VOICE - “A BANK.”**

CLIPS 4 THROUGH 7 RECORDED BY CONNIE WILLIAMSON

**CLIP FOUR: CONNIE WILLIAMSON HAD ASKED IF ANYONE PRESENT HAD EVER WORKED IN THE BUILDING.
MALE VOICE - “YES.”**

**CLIP FIVE: CHERYL WHITE HAS ASKED WHAT YEAR IT WAS.
MALE VOICE - “FORTY-FOUR.”**

**CLIP SIX: CHERYL WHITE HAD ASKED FOR THE NAME OF ANYONE PRESENT.
MALE VOICE - “DAVID”.**

**CLIP SEVEN / MIXED P-SB7 AND EVP VOICE: CHERYL HAS ASKED IF ANYPONE PRESENT COULD TOUCH OR WALK BY HER EMF METER.
CHERYL WHITE - “JUST WALK BY IT”.
VOICE 1 - “I DID.”
VOICE 2 - “SHIT.”
VOICE 3 - “YOU ARE GOING TO BREAK MY HEART.”**

END PART FOUR

PART FIVE

THEORETICAL EFFECTS OF ENVIRONMENTAL ENERGY ON PARANORMAL PHENOMENA

Over many years, there seem to be consistent reports from individuals who live many miles, and often, many years apart concerning a correlation between extra energy in the environment and a perceived increase in paranormal activity. It is readily acknowledged that the sun is the greatest source of energy in our solar system, and this energy is in a constant state of flux. When solar energy is increased through solar flares, and other types of solar activity, the number of reports of paranormal activity increases. These flares and eruptions cause x-ray events, radio events, proton flux, electron flux, and geomagnetic impulses. It is readily acknowledged that these effect everything on our planet from weather, to satellite communications, disruptions in electrical grids, and even the flow in pipelines. These events also result in what is known as geomagnetic induced currents (gic) or telluric currents in the earth's crust, and waterways. These electrical flows tend to go toward the sun in general, as well as toward the equator in the daytime, and the poles at night.

We do not, at this time, totally understand how environmental energy sources can effect paranormal phenomena in a direct manner, or even if they do. Also, this author readily concedes that if paranormal activity is increased by local energy, that solar energy is not the only available source of local energy; it is just the most prevalent. If this relationship does exist, it would support the general observations of myself and others of a propensity of paranormal activity to be detectable in areas where water and large quartz deposits are found, as these would be conductors for the telluric currents, thus making energy readily available.

This author feels that in order to perform research on the correlations of solar weather and paranormal activity, long term case studies offer the best method, as of this time, to find support, or to deny, this hypothesis. Therefor, data concerning solar weather for the date of our paranormal investigations will be supplied, with no efforts made to draw conclusions thereof, either positive or negative. This data is provided by the National Oceanic and Atmospheric Administration. The NOAA also readily states that the total effects of space weather on live biological entities on planet earth is not known or understood at this time, either.

If an attached graph does not show activity on the date and/or time of our investigation, it does not mean that there was no solar activity, but the the solar activity at this time was considered normal.

CONCLUSION: This data is not meant to conclusively show that any paranormal activity, or lack thereof, found on our investigation was caused by the solar activity at that time, but that there could possibly have been an influence by the solar weather at this time, positively or negatively correlated to the strength of such solar weather. Other such energy systems as lunar cycles, thunderstorms, and utility networks may provide an alternative energy supply for paranormal phenomena.

SPACE WEATHER WARNING ALERTS AND TIMELINE

CONDITIONS NOTED FOR NOVEMBER 18th:

SOLAR ACTIVITY HIGHER THAN NORMAL

CONCLUSION

At the time and places tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid or geophone. No anomalous EMF fields were noted. No anomalous hot spots or cold spots were noted. No anomalous motions were noted. Seven recordings were made of words formed by the P-SB7, and 1 mixed audio clip of standard EVP voices was obtained during standard recording sessions. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas of testing. The consciousness testing was strong, and consistent in many areas. We feel that the personal experiences, the extensive audio noted, and the positive tests received in the PEAR testing are probably indicative of an anomalous presence or presences.

We would like to thank the clients for inviting us into their business home, and for the opportunity to study the phenomena there. We would also like to thank them for their most gracious hospitality, and hope that me may be able to return there again soon.
