

INVESTIGATION SUMMARY REPORT DECEMBER 5th, 2015

PRIVATE RESIDENCE BOSSIER CITY, LA.

NOTE: THE CLIENTS IN THIS INVESTIGATION HAVE REQUESTED CONFIDENTIALITY. SOME OF THE DATA IN THIS REPORT MAY HAVE BEEN OBSCURED TO HONOR THEIR REQUEST. THIS IN NO WAY AFFECTS THE DATA PRESENTED, OR ANY CONCLUSIONS HEREIN. NO PHOTOS OF THE INTERIOR OR THE EXTERIOR OF THE RESIDENCE HAVE BEEN INCLUDED.

HISTORY

The home is brick construction, on concrete slab. The home was built in the mid-1970's, and has been owned by the clients for about nine years. Shortly after purchase, the clients remodeled the home.

EXPERIENCES

The clients report some activity at the time of purchase about 10 years ago. This activity was short-lived. The home was quiet until about the fourth quarter on 2012, when the activity began to escalate, and continues to date.

The clients report seeing shadow figures, and a distinct male figure in the entry way. Footsteps are often heard when no one is in the area of the sounds. The sounds of objects being moved, scratching on the walls and doors, as well as the juggling of door knobs is often reported. Electrical devices are turned off and on, including those with manual switches. Clients and visitors report the sensation of being touched by unseen hands. Clients report this extends to being touched or the sensation of being restrained, while in bed. Voices calling out the clients' names are often heard, including by callers who call the home and hear these voices during conversations with family members. Room doors are opened and closed anomalously, as well as cabinet doors and drawers.

INVESTIGATION

DATE OF INVESTIGATION: DECEMBER 5th 2015

PARTICIPANTS: BESS MAXWELL, KIRK CORMIER, JOHN COMBS, KEITH MYERS, TRACI MYERS, SUSAN COLEMAN, AND CONNIE WILLIAMSON

EQUIPMENT: Digital Cameras, Infrared cameras and DVR system, Digital audio recorders, Ion Counters, P-SB7 Spirit Box, Infra-sound detection equipment, Digital thermometers, Various EMF meters including Tri-Fields, Motion detectors including geophone and laser grid systems, Ovilus interactive voice communications device, and PEAR REG-1 units for the detection of anomalous human consciousness with software on Hewlett-Packard computers.

INVESTIGATION: At the time and places tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid or geophone. No high EMF fields from AC current were found in any location likely to result in prolonged exposure, although there are some areas of high EMF fields from electrical devices.. No anomalous hot spots or cold spots were noted. No anomalous motions were noted. No standard EVP voices were recorded. Four recordings were noted of words formed by the P-SB7. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas of testing. No inordinate positive ion counts were noted.

PERSONAL EXPERIENCES:

Some unusual thermal anomalies were noted in a bedroom by team members, cause uncertain and unknown.

PART TWO

Consciousness Detection

This type of testing is passive in nature and designed to detect, through the quantum tunneling method, the probability that a human type consciousness may be present affecting the REG-1 units, when all incarnate consciousness has been removed from the areas of testing.. The minimum reporting standard for this type testing is $p < .05$, with p (probability) representing the chance that the event could be the result of chance alone in the probability distribution. Thus, the probability of an anomaly is 95% per test, or greater, to be considered statistically significant. We then compute the probability that all tests are false, that is, that none of the tests indicate an anomaly.

A total of 24 tests were run in all areas. At the minimum reporting standard of .05, we would expect to receive a total of 1.2 tests due to chance alone affecting the probability distribution, resulting in 2.0 false positives for the human consciousness being the cause. ($36 \times .05 = 1.2$, rounded up to 2.0) The actual mean score for the 12 positive tests was $p < .027228$. The correction for the number of expected false positives would be $24 \times .027228 = .65$ false positives, which we would round up to 1. As noted, we received 12 positives, much greater than the mathematically expected 1 if only chance were involved.

After the room designation, the number or alpha character designates the test number or sequence in that room, on that particular testing computer.

EXAMPLE: Bedroom Three 1 Bedroom number three, test number one.

The test scores are as follows:

COMPUTER 1

Bedroom One 2	$z = 2.053$	$p < .020036$
Bedroom One 4	$z = 1.977$	$p < .024021$

COMPUTER 4

Bedroom Two 2	$z = 2.179$	$p < .014665$
Bedroom Two 4	$z = 2.206$	$p < .013692$
Bedroom Five 2	$z = 1.772$	$p < .038197$
Bedroom Five 4	$z = 2.100$	$p < .017864$

COMPUTER 5

Bedroom Three 1	$z = 1.912$	$p < .027938$
Bedroom Three 2	$z = 1.869$	$p < .020811$
Living Room 1	$z = 1.872$	$p < .030603$
Living Room 3	$z = 1.856$	$p < .031727$
Bedroom Four 1	$z = 1.760$	$p < .039204$
Bedroom Four 3	$z = 2.781$	$p < .037456$

The probability that these 12 tests are all false positives, due to chance alone in the probability distributions, and not indicative of human consciousness interaction when none incarnate was present to do so, through quantum tunneling is:

PROBABILITY

.00000000000000000000809

ANOTHER WAY OF EXPRESSING THIS NUMBER IS

8.09 X 10 TO THE MINUS 20th POWER

END

PART TWO

PART THREE

The Ovilus

Carl Jung, Swiss psychiatrist and the father of analytical psychiatry, coined the word “synchronicity”.

Synchronicity - The experience of two or more events, that are apparently causally unrelated or unlikely to occur together by chance, that are observed to occur together in a meaningful manner.

This concept does not question or compete with the notion of causality. Instead, it maintains that just as events may be grouped by cause, they may also be grouped together by meaning. Since meaning is a complex mental construction, subject to both conscious and unconscious influence, not every correlation in the grouping of events by meaning needs to have an explanation of cause and effect.

NOTE: In the paranormal, there are many experiences which are noted and observed for which the laws of science, as we know and understand them at this time, cannot explain. In EVP studies, blank and sealed cassette tapes have been found to have EVP voices on them, without having been previously inserted into a recorder. The actual method of the sending of EVP voices remains unknown. Television sets, while turned off, have had faces of the deceased plainly visible, as if the set were on. Telephone calls with the caller having the voice and knowledge of a deceased individual have been heavily documented. Phone calls and text messages have been sent to cell phones which have no SIM card to properly receive calls, but do receive the anomalous calls. We simply do not know, at this time, exactly how these events occur or are possible.

In paranormal research, it is the reporting of these cases that is important. These and similar phenomena are reported by individuals who have never met or known each other, and live thousands of miles apart, and often hundreds of years. Yet the reports remain consistent. Case studies, in volume and over time, allow for hypotheses and theories. It is in this simple interests of reporting that this section is included.

The Ovilus is a device that intercepts EMF signals, and converts them to audio, from an internal dictionary of over 2,000 words. It is theorized that discarnate entities may be able to INFLUENCE, under some circumstances, this word selection process. It is not thought, in the majority, that these entities may exert 100% CONTROL over the word selection, and simple research and listening to the output of the device verifies this, to the normal and reasonable individual. It is also noted that coincidence may play a part in the process, with the probability of about 1 in 2.047, in getting a correct response to a direct question. It is only in the long term studies, with consistent reporting, that more exacting theories regarding coincidence versus influence may be formulated. Probability, from a math standpoint, rises sharply as valid answers are observed in larger quantity, over a brief period of time and small number of total responses. For example, the probability of getting two correct responses in a row is 1 in 4,190,209. ($1/2047 \times 1/2047$) This assumes there is only one correct response per each individual question.

The manufacturer of the Ovilus device indicates at the present time, there is insufficient data, science, and case study to indicate the Ovilus data should be evidential. This author agrees. This case study is not presented as hard evidence. It is presented so that others may have and consider its merits, or lack thereof. If no reporting is made, no theories may be formulated, or comparisons made with other reports to study correlations, if any. Each person who reads Part

Three must consider this data in light of his own beliefs, or knowledge of events that are known to have occurred to them personally. Beauty here is truly in the eye of the beholder, or its lack thereof.

SUMMARY OF INTRODUCTION - PART THREE - The data presented here on Part Three IS NOT CONSIDERED EVIDENTIAL by the manufacturer of the Ovilus device or the La. Spirits North Team. It is simply included in the interests of completeness of events, and for study/research purposes only.

CLOSING NOTES – PART THREE

There may have been additional incidents, or not. We have presented these incidents in Part Three in the interests of research and completeness of studies performed. It is acknowledged that answers may, in many cases, rely on judgment as to the accuracy of the answer. If the question, “Is the car red?” is posed, assuming the car’s color is not a transition color, the answer of either “yes” or “no” may be easily evaluated. Or, assuming no transition color, the answer to “What color is the car?”, the answer “red” may be easily evaluated. Others are not so simple, “Happy”, for example. And it is readily acknowledged that those hearing a response from an Ovilus device may NOT have sufficient knowledge to correlate a given answer as relevant or “correct”. The volume of comments received from the Ovilus device was very large, and there may be meanings that those of us not experiencing daily life at this home, or intimately familiar with its history, do not have a connotation for. The list is presented as received, in proper order, in the interest of completeness of research conducted. It is also noted that, although the words are spoken individually, there may be meanings or connotations in word groupings within word lists. These meanings or connotations may only be meaningful to certain individuals with the experiences to which these word phrases pertain, and not to all individuals. Words within the list that have an inordinate statistical frequency of appearance may also fall within the meaningful category, and need to be analyzed by those with a more intimate knowledge of the history of the location.

PART THREE**

PART FOUR

THE MODEL P-SB7 SPIRIT BOX

This device utilizes a milli-second adjustable forward or reverse sweep technique coupled with a white noise distribution between frequency steps. This is designed to add ambient sound energy for the production of real time EVP, allowing for instant feedback in communications attempts. See item 16 in “General Parameters of the EVP Phenomenon”.

P-SB7 DATA RECORDED BY BESS MAXWELL

DATA FROM DAUGHTER'S BEDROOM

CLIP ONE:

CHILD'S VOICE: “MOMMY”.

CLIP TWO: THE RESEARCHERS HAD ASKED FOR THE DECEASED DAUGHTER TO SAY SOMETHING.

CHILD'S VOICE: “HEY!”

DATA FROM SON'S BEDROOM

CLIP THREE:

MALE VOICE: “HUSBAND.”

CLIP FOUR:

MALE VOICE WITH ACCENT: (HISPANIC?)

“THANK YOU.”

SECOND MALE VOICE – WORD WAS NOT CLEAR

FIRST MALE VOICE;

“WHAT DO YA' THINK?”

**STANDARD EVP
NONE NOTED**

CONCLUSION

At the time and places tested, no anomalous photos were taken. No data was noted on video. Nothing unusual was detected by laser grid or geophone. No high EMF fields from AC current were found in any location likely to result in prolonged exposure, although there are some areas of high EMF fields from electrical devices. No anomalous hot spots or cold spots were noted. No anomalous motions were noted. No EVP voices were recorded. Four recordings were made of words formed by the P-SB7. No excessive positive ion counts were noted. No infrasound, nor standing waves of such, were detected at times of testing, in the areas of testing. The consciousness testing was strong, and consistent in many areas. We feel that the personal experiences, and the positive tests received in the PEAR testing are probably indicative of an anomalous presence or presences.

We would like to thank the clients for inviting us into their home, and for the opportunity to study the phenomena there. We would also like to thank them for their most gracious hospitality, and hope that me may be able to return there again soon.
