

Investigation Summary Report

Private Residence Haughton, LA

HISTORY

NOTE: The client in this report has requested confidentiality. Some references in this report may have been obscured to protect the client's privacy. This in no way alters the data or conclusions herein.

DATE: August 26, 2009

PARTICIPANTS: Investigators Crystal Vines, Bess Maxwell, Tricia Grayson, and John Combs

BACKGROUND

The client's husband passed away as the result of a fire behind the client's home, approximately one year prior to the investigation. Immediate after his passing, the client started experiencing his presence, in the general atmosphere of the home, perceptions of his form, his voice, and the presence of his cologne in the air of the residence, the smell of which would come and go, as opposed to a residual background lingering. Some electronics were switched off and on intermittently with no one around. These perceptions were experienced by the client, her son, and her daughter. The client felt the necessity to move to another state. The client felt indecision in the choice of remaining with what she felt was the presence of her husband, and moving away to leave the unpleasant memories of the fire and its tragic results.

At the time of the investigation, all furniture and household furnishings had been removed from the home.

INITIAL INDICATIONS

The phenomena as reported are consistent with the post mortem apparition phenomenon.

EQUIPMENT: Digital still cameras, motion detectors, EMF meters including Tri-field, digital thermometers, various digital audio recorders, digital mini cam, and P.E.A.R REG-1 unit with Hewlett-Packard computer for detection of anomalous consciousness.

INVESTIGATION

At the time of the investigation, no anomalies were detected on audio, video, or still camera. EMF readings and temperature were normal. Four of nine anomalous consciousness tests were statistically significant, 44%. By chance only, nine studies, the expected amount would be, at minimum reporting standards, .45, less than one. The bedroom with the electronics being switched off/on, yielded no significant results, at the time and particular area of testing. The main areas showing statistically reportable results were the two bathrooms, and the master bedroom.

Mainbath	Mean z= 1.911	Mean p< .028002
	Peak z= 1.933	Peak p< .026618
Masterbath	Mean z= 1.899	Mean p< .028782
	Peak z= 2.352	Peak p< .009336
Master BR2	Mean z= 1.642	Mean p< .050295
	Peak z= 2.043	Peak p< .050526
Mainbath2	Mean z= 2.596	Mean p< .004716
	Peak z= 2.655	Peak p< .003965

The statistical probability of these four graphs being chance only, not anomalous, is as follows, considering all four as a unit:

Mean p< .00000008496
Peak p< .000000002022

CONCLUSIONS

No anomalous data was indicated by video, audio, or still photography at the time, or in the particular areas tested, at this residence. No anomalous EMF fields or temperature drops were indicated at the time and in the areas of testing. The main areas showing significant signs of an anomalous consciousness were the master bedroom, and the two bathrooms. The master bedroom was indicated by the client to be an area showing significant signs of anomalous presence. At the time of the investigation, the furniture had been removed from the home, and the family had been out of town for several days. One of the main traits of the post mortem apparition is to return to family, home, and familiar surroundings. At this time, the home itself was the main tie to the previous life, if the phenomena were occurring. This is the line of thinking, resulting in testing on the bathroom areas, with significant results. After visual inspection of the graphs and data, I conferred with the client regarding the remote possibility that had been the impetus behind the testing of those particular areas. These two areas were the only two areas still containing the possibility of a remote, theoretical tie to a prior memory, since the furniture had been removed, and the family out of state. The client stated that the speculative theory was correct, and that, upon returning home from work, her husband would usually, and with great fondness, spend extended time either in the shower, or soaking in the tub, both of which were among the few remaining fixtures in the home that could be the source of a past

fond attachment. Given the reports of the client, who had described in detail, the presence of a post mortem apparition, and the data garnered by consciousness studies, I believe that the possibility exists that this was an example of a post mortem apparition. We wish to, again, issue our condolences to the client and her family. We wish them the best in their relocation, and thank them for allowing us a visit in their home.
